

The Tour de France is an iconic annual bicycle race that has been held every year since 1903, except during World War I and World War II. The race attracts elite cyclists from all over the world and is known for its grueling mountain stages, time trials, and sprints. The Tour de France dataset provides a comprehensive record of the race's history, including information on key attributes such as the winner's average speed, the total distance covered in kilometers, the number of stages, the number of finishers and entrants, the winner's name and nationality, the winner's team, the start and end dates, and the starting and finishing cities with their corresponding latitude and longitude coordinates. This dataset is a valuable resource for researchers, analysts, and cycling enthusiasts who are interested in exploring the rich history of the Tour de France and identifying trends and patterns over time.
